## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of group AI-01 drawn to SEQ ID No. 1 in the reply filed on November 1, 2006 and November 07, 2005 is acknowledged. The traversal is on the ground(s) that all claims are united by a single novel protein and uses thereof. This is not found persuasive because each disclosed sequence is a distinct peptide sequence and is considered a separate invention.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claims Status***

Claims 1-11 are being examined.

Claims 12-21 are withdrawn from further consideration.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 5, 6-9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 2, 5 and 16 of U.S. Patent No. 6,509,444 in view of Hirai et al. (US 5,216, 127).

Patent '444 teaches a method of separating or isolating a serum amyloid A protein (SAA) having sequence ID No. 1, from a colostrum sample of mammal.

However, Patent '444 fails to teach a step of measuring the presence or amount of said SAA protein and performing an ELISA assay.

Hirai teaches performing an ELISA assay to detect SAA protein in any fluid component originated in a living body. (see col. 3, lines 17-20; col. 19, line 50; abstract).

Thus, it would have been obvious to one of ordinary skills in the art to detect or measure the presence or amount of SAA protein in a sample using ELISA assay method as taught by Hirai as a sequential step in the method of Patent '444 to detect the presence or amount of SAA since a detection step must be performed in order to confirm that there is any SAA being separated in the method of patent '444. ELISA is a conventional method of assay or detecting any protein.
